

➤ Going Green with Bee Green™ LED Bulbs

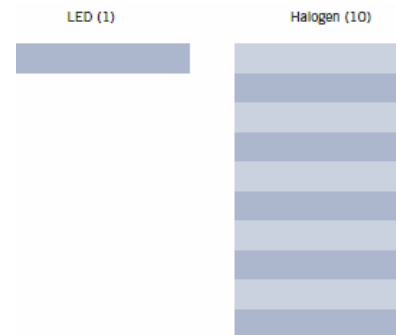

One of the best ways to reduce power consumption in a recreational vehicle, boat or home is to convert to electricity-saving LED bulbs and lights.

Typically, non-LED bulbs may consume the same amount of power (or even more) as a refrigerator or other appliance. Renovating your system with Bee Green LED™ bulbs may allow you to increase your light output while saving you battery power. At the same time you greatly reduce the amount of heat generated from light bulbs...saving you cooling costs too!

Bee Green™ LED Bulbs have many advantages:

- Low Power Consumption- LED bulbs use up to 5x less power than their equivalent halogen and Xenon predecessors.
 - Produce 80% Less Heat - keeps cabins / rooms cooler.
 - Contain no filament or glass to break - shock resistant.
 - Contain no mercury (as in fluorescent bulbs) - environmentally friendly.
 - Long Life - rated up to 40,000 hours
 - 2 Year Warranty - peace of mind.
- of our bulbs are constant current, EMI free
(no electromagnetic interference)

Electricity Consumption

Bee Green LED™ bulbs utilize the latest technology SMD (surface mounted device) LEDs, which gives us a slimmer card, where we place the diodes closer and get more room on the back for effective DC/DC transformers. The result is a card with more light intensity and better light spread with more wavelengths. This in turn makes less shadows and provides better resistance against voltage overload. We even go the extra step to add fuses for protection from entire circuit outage and some include a transient suppressor to protect from voltage spikes (see individual bulb specs).

Bee Green LED™ specializes in bulbs that are specific to the recreational vehicle and marine industries. Many of the items listed here have additional options such as base type or LED color.

We welcome your inquiries for your particular requirement and we welcome the opportunity to help you create prototype bulbs for your project.

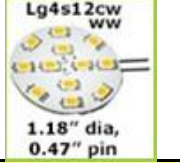

➤ *Thank you for Being Green !*

Bee Green LED™ 12-24 Volt (10-30v DC)
and 12 Volt AC-DC LED Bulbs

Earth Friendly
LED Lighting

*G4 Pins and Extended pins may be trimmed to fit fixture.

**Individual retail packing is available for additional cost - lead time required.

Bee Green LED bulbs utilize a true constant-current topology, are EMI free, and are designed with an 80 CRI value to provide quality light color.

Our products are produced in an SGS certified ISO 9001:2008 factory with certifications including CE, ROHS and TUV (G4 models). Warranty - 2 years.

Looking for an item you don't see? Please ask. This listing is a representation of what we can offer (minium order may apply).

Prices are FOB Sarasota, FL and are subject to change without notice. Availability subject to change due to manufacturers continued product improvements.
